

Retail Cash Technology

An integrated Software and Hardware solution by Transtrack International and Gunnebo.

Regional Retailers and individual store owners want to provide their customers with the option to pay with cash, however this needs to be safe and easy to manage. With the combination of the Gunnebo and Transtrack solution, as a retailer (or associated partners i.e. Commercial Banks, CIT's and other service providers) one is able to achieve both.

Retail cash technology

The retail store staff deposit notes in the network connected GUNNEBO Cash Handling machines. The unit registers the note(s) and is able to register the depositor, to allow for auditing and reconciliation. The CashWebCommunity (CWC) platform receives an electronic update from the cash handling unit, which allows the cash content and technical state to be visible in real-time. Daily CWC is able to pre-credit the retailer's bank account to relieve the pressure on cash flow. With the use of a sophisticated algorithm CWC is able to auto-issue orders for collection to Cash-in-Transport (CIT) companies and counting for processing. End-to-end reconciliation is automated combining information from the cashiers (POS system), the retail terminals and the counted results at the cash center.

AT A GLANCE:

- Gunnebo cash handling solutions are adaptable to customer needs
- Highly secure and safe cash management solutions
- Real-time online visibility of cash, services and technical status

and are in a partnership with the ability to deliver to customers world-wide.

Safepay

HighSpeed

Counter Deposit Unit

Remote unlocking of (parts of) the safe by CIT or HQ allows controlled onsite support.

Benefits of an automated cash handling system:

- Immediate authenticity check of money
- Transfer of risk from receipt generation
- Optimised liquidity as funds clear promptly
- Reduced risk of robbery
- Lower costs for cash handling (e.g. manual counting not necessary)
- Fewer collections and less administration (fewer counting and checking)

About Retail and Cash Monitoring Services:

A complete modular solution based on

the following layers:

- Cash Process Optimization
- Same Day Credit
- Maintenance
- Application Managed Hosting
- Training Managed Service
- One Time Code Management

Gunnebo verifies, counts, recycles and stores the deposited notes and coins safely in a cassette or bag in a security rated safe. The network connected safe immediately sends data on the deposit(s) to a secure portal and CWC.

Visibility of cash levels

per denomination within a selected period and aggregation level

With the portal the store manager can control the individual staff authorized to deposit notes and obtain an immediate insight in the status of the safes. The CWC software receives all transactions and technical status data from the safes for analysis and forecasting. CWC will automatically find the best day for the service provider to collect the cash from the safe and generate an order for the collection and alert the cash center of the incoming consignment.

End-to-end cash management

CashControl and CWC combine an affordable solution for retail businesses. Decoupling cash intake from the in-store handling and the logistics, with the option to provide the retailer with “same day value” allows for new opportunities for cost savings for retailers and margin improvements for the solution provider.

Gunnebo The Gunnebo Security Group is a global leader in security products, services and solutions with an offering covering cash handling, safes and vaults, entrance security and electronic security. The offering is primarily for banks, retail, CIT, mass transit, public & commercial buildings, and industrial & high-risk sites.

Transtrack With its community approach for software in the cash industry, is continuously applying modules of CWC as a solution making the cost of cash lower and at the same time improve margins for commercial service providers..

CashWebCommunity Extensions

- Call Management: online registration, monitoring and managing queries, complaints and discrepancies between the retailer, the service provider and others involved.
- Asset Management: online management of ink protected cassettes throughout the supply chain between the safe, the service provider(s) and the asset vendor.
- Cash Center automation: full automation of cash processing and inventory management for service providers.
- Transport automation: full automation of the transportation process including on-route PDA's with workflow driven functionality.

Besides retail safes the CWC software is also used for ATM forecasting & optimization and for Merlin coin issuing machines at bank branches.
