

Omnitracs Roadnet Anywhere

Routing + Dispatch

Cloud-Based Vehicle Routing + Dispatching Made Simple

Omnitracs Roadnet Anywhere's advantage:

- No additional hardware needed
- Web-based software-as-a-service application works with smartphones and tablets, and is accessible 24/7
- Integration with major ERPs makes it easy to connect your routing and dispatching to your other internal systems

Omnitracs Roadnet Anywhere Routing & Dispatch:

An automated system that allows you to create efficient route plans while tracking drivers compared to your plan. As orders come in, routes are created and pushed to mobile devices. Driver activities are monitored via a GPS-enabled smartphone, bringing exceptions, such as off-plan, to the forefront.

Go beyond basic routing.

Create the lowest cost routes. Adhere to the rules you define while tracking against the plan – resulting in real-time updates on customer delivery and service.

Routing is only half the equation; with Omnitracs Roadnet Anywhere Routing & Dispatch, driver accountability increases as the system pushes route information to your drivers' mobile phones and notifies you of any changes. Quickly answer those "Where's my order?" questions as you update your customers with delivery and service status.

With an easy drag and drop interface, quick moves can be made to stops and routes, resulting in instantaneous changes to distance, time and cost. This low-cost but powerful solution will have you up and running with expert vehicle routing and dispatch in days, not months.

With Omnitracs Roadnet Anywhere Routing & Dispatch you'll be able to:

- Decrease Routing Time – Spend less time configuring routes and more time assessing 'what-if' scenarios to produce more efficient routes
- Reduce Transportation Costs and Miles – Create daily routes using powerful algorithms and street-level routing, in conjunction with business constraints, resulting in less miles driven
- Increase Resource Utilization – Make better use of existing resources and vehicle capacities by delivering more and driving less
- View Fully Integrated Map Detail – View each route as it's built geographically
- Dynamically Add Orders – Ideal for last-minute orders. The software suggests the best route while striking the perfect balance between efficiency and service standards
- Manage Order Volume Quickly – So you can create efficient routes
- Increase Routing Efficiency – Increase the number of stops/customers per route while decreasing mileage and overtime
- Improve Customer Service – Creating and adhering to the route plan helps you achieve this
- Establish Driver Incentives – Base incentives on actual results such as mileage deviation or meeting customer service windows
- Compare Planned vs. Actual – Review what actually occurred on your routes, relative to the original plan
- Report on and rate driver performance – Get the data you need with nearly 20 standard reports

Product Offering and Related Features	Omnitracs Roadnet Anywhere Routing	Omnitracs Roadnet Anywhere Routing + Dispatch
Routing		
Route Editing: Editing routes is made easy by quickly moving stops between routes using maps or list views	✓	✓
Route Scoreboard: Don't make expensive manual moves – know exactly what the impact of each move is via the Route Scoreboard	✓	✓
Route Template: Quickly create route templates to make daily routing fast and easy using visual tools	✓	✓
View & Print: Users can not only view, but print all windows including stop lists and routes	✓	✓
Multiple Routing Options: Routing can be fully dynamic, static or a combination of both to meet your business needs	✓	✓
Business Constraints: Routing based upon preferred route times, equipment capacity, number of stops while adhering to preferred service windows	✓	✓
Breaks Management: Automatically adding pre- and post-trip time, breaks, waits and layovers creates accurate route plans during the routing process, plus many more	✓	✓
Manage Pickups & Deliveries: Pickups can be fully integrated into routes making sure that your daily plan is accurate	✓	✓
Suggest Route: Late or manual orders are no problem with the powerful Suggest Route algorithm which finds the best route	✓	✓
Multiple Map Views: Being able to see what's going on just like you were there through multiple map views that include satellite, hybrid and street views	✓	✓
Road Restrictions: Route plans are only as accurate as the streets commercial vehicles can drive on – directions and plans are accurate when created because they adhere to commercial road restrictions	✓	✓
Geocoding Locations: Interactive Geocoder utilizing Google Maps® to ensure that your routes are accurate	✓	✓
Customer Segmentation: Segment customers for better problem solving	✓	✓
Dispatching		
Real-Time Location Info: Answer "Where's my Truck?" question in seconds with access to data in real time		✓
Driver Directions: Go green and stop overloading drivers with paper: Mobile applications replace paper manifests and provide driving directions		✓
GPS Playback: Coach drivers that run extra miles or make unplanned stops with real data		✓
Actual vs. Planned Reporting: Identify trouble delivery spots and driver variances		✓
Driver Behavior: Identify undesirable driver behavior – speeding, stopping too long or being out of contact with the office		✓
